## Antibiogram Data from 2020 Isolates

Niaz Banaei, M.D., Director of Clinical Microbiology Laboratory

Nancy Watz, CLS, Laboratory Reference Technologist, Antibiotics

Farnaz Foroughi, CLS, Laboratory Reference Technologist, AFB

Laleh Ghafghaichi, CLS, Laboratory Reference Technologist, Mycology

Values expressed are % susceptible

### Gram Negative Bacilli

	No. of Isolates (a)
Achromobacter xylosoxidans	21(b,c)
Acinetobacter baumannii	13(b)
Citrobacter freundii complex	11(b)
Enterobacter cloacae complex	45
Escherichia coli	397
Klebsiella aerogenes (Enterobacter aerogenes)	11(b)
Klebsiella oxytoca	47
Klebsiella pneumoniae	86
Morganella morganii	18(b,c)
Proteus mirabilis	26(b)
Pseudomonas aeruginosa	93
Pseudomonas aeruginosa (CF-mucoid) (d)	19(b)
Pseudomonas aeruginosa (CF-non-mucoid) (d)	42
Salmonella spp.	29(b,c)
Serratia marcescens	21(b)
Stenotrophomonas maltophilia	47

Drug cost: Please choose the appropriate antibiotic based on best spectrum of coverage and lowest cost. Costs are reflective of 1 day of therapy based on adult dosing and include drug levels and reformulations.

\$ = \$0-20  
\$\$ = \$20-50  
\$\$\$ = \$50-100  
\$\$\$\$ = >\$100

(a) Testing for inducible clindamycin resistance performed on all staphylococci, group B strep, and S. pneumoniae  
 (b) Sensitivity confirmed by request. (c) Data from isolate totals <30 may be statistically unreliable.  
 (d) Includes isolates from 2019. (e) Based on meningitis interpretive criteria (more conservative). Nonmeningitis interpretation is 93%. (f) Ceftriaxone uses the meningitis interpretive criteria (more conservative).

## Candida

Percent Susceptible By Broth Microdilution (YeastOne, Trek Diagnostics)		No. Tested	Amphotericin B (a) (\$\$\$\$\$)	Fluconazole (b) (\$)	Voriconazole (\$\$\$\$)	Caspofungin (c) (\$\$\$)
Candida albicans	17(d,e)	100	100	100	100	100
Candida glabrata	6(d,e)	100	67	-	83	
Candida parapsilosis	13(d,e)	100	77	85	100	
Other Candida species	8(d,e)	100	(f)	43	100	

(a) Suggested Amphi Resistant breakpoint MIC > or = 2 mcg/ml. (b) Susceptible dose-dependent breakpoint MIC was used.  
 (c) Consult Peds ID if Caspofungin being considered for treatment. (d) Data from isolate totals <30 may be statistically unreliable.  
 (e) Includes isolates from 2019. (f) Species other than C. krusei are 100% susceptible; C. krusei is intrinsically resistant to fluconazole.

## Haemophilus influenzae

For infections with beta-lactamase producing H. influenzae: cefuroxime, ceftriaxone, trimethoprim/sulfamethoxazole, amoxicillin/clavulanate, or azithromycin is recommended.

Ceftriaxone is drug of choice for CNS infections.

At LPCH, 72% (57/79) of H. influenzae are ampicillin susceptible based on 2019-20 data.
